

MFJCSTUDIOS

NO 'TOO LONG; DIDN'T READ' VERSION. READ IT THROUGH. I AM PROBABLY THE LAZIEST PERSON ALIVE BUT EVEN I TOOK THE TIME TO WRITE THIS. READING IS EASIER THAN WRITING. OK? THANKS. IF STILL NO THEN DELETE THIS AND ALL OTHER FILES YOU DOWNLOADED, AND TURN OFF YOUR COMPUTER.

Dear HackForums/BooterDown users (and to-be users of my upcoming projects):

MFJCDevelopmentStudios, in association with BooterDown, is proud to present Orgilicious, a compilation of Robert Danielson's (or Orgy's) files.

The contents of this archive include many of the source code files, scripts, and software programs that Robert uses for both his service and his project twBooter.

HOWEVER, before proceeding any further, I'd like to point out the REASON for this release. Robert Danielson (Orgy), and his friend Brendan Johnston (BV1 ツ), both feel as though it is OK to scam JUST AS LONG AS no scam report is posted against them. Please exercise extreme caution when dealing with these users. I beg you. Please.

Please take some action on HackForums against scammers. It'll really help that board.

Back to the files. I'll list what's included.

- twBooter v2 source – To be quite honest, I'm not sure if this is already released or not, but meh. Don't pay Robert his \$250. It's right here. In the 'twBooter v2' directory. Enjoy.
- twBooter v3 source – Robert's only running twBooter v3 to fund his future projects. Not because he loves you. </3 Just to get quick money. The exact thing he's been trying to fight. Don't pay him the monthly money for that, either. ☺ Get it right from the 'twBooter v3' directory. Because I love you. All of you.
- twBooter Spoofed SYN script – Robert didn't make this. Stop lying to people. eKKiM did, you paid him \$100 for it. </3 Meh. People, have it for free. Get it from the 'Attack Scripts' directory, it's called syn.c.
- twBooter Spoofed UDP script – Robert didn't make this either. He bought this from eKKiM for \$100 too. Enjoy it too. It's in the 'Attack Scripts' directory, called udp.c.
- SOCKSLoris – I think the one on HackForums right now is a bad one. Either that or it has a password so nobody can use it anyways. But enjoy this one. This is the one that people pay \$350 for. The one Robert uses for his service. So you don't have to pay him \$5/hour. Also comes with free SOCKS proxies. It's in the 'Attack Scripts' directory, just unzip the 'socksloris.rar' file with the free WinRAR software available at rarlab.com. Well, I think it's free anyways. The trial period never ends. That means it's free. By the way, this is good for mainly forums and blogs.
- UDPMod – This is the Spoofed UDP software Robert uses for his service. It's in the 'Attack Scripts' directory, just unzip 'udpmod.rar' again with WinRAR. Don't pay him \$5 an hour. ☺
- Spoofed UDP server scraper – This is the software Robert uses to scrape up his spoofed UDP reflection servers. Have fun. It's also in the 'Attack Scripts' directory, and it's called script.php.

By the way, here's Robert's setup for twBooter. Go on and make your own twBooter now. Don't pay him his money. Earn your own instead.

- Bargain plan from WorldStream.NL for the backend. They can be found here: <http://www.worldstream.nl/serverdeals.php>. Robert uses this to host the website for twBooter.com. It's Nginx.
- Ecatel attack servers. Their websites are here: <http://ecatel.info/> and <http://myserverpanel.net/>. He has two or three servers with an Xeon X3220 CPU, 500GB HD, 2GB RAM, 100TB Bandwidth and 1Gbps unshared connection. I recommend Ubuntu, it's easiest to use.

- Rackspace hosts his firewall protection. He has 1 load balancer setup and 3 cloud server setups that have CentOS 6 and 256MB RAM. The firewall is a software called Squid. So it's Cloudflare > Load Balancer > Cloud servers with Squid > Backend with Nginx. Their website is at <http://rackspacecloud.com/>.

Here I'll try to explain some of Robert's software.

- twBooter sources are provided by us, as is. They're the full source code, but you'll have to make your own DB. No setup help, sorry. ☹
- For twBooter attack scripts, instructions are given in the files themselves. Open it up in Notepad. Just upload them to your spoofing enabled server, to the /root directory, and run the commands under 'Compile:' one line at a time. You'll then be able to use the command following 'Usage:' to start the attack. For the spoofed UDP, you'll need to use the scraper to get the list. Continue reading.
- SOCKSLoris is quite simple. Run gathersocks.exe and after it grabs the proxies, upload both proxies.txt and socksloris.exe to your Windows attack server, both to the same directory. There, just start socksloris.exe, paste the URL to the website you want to attack, set a 350ms delay, 0 for all proxies. For SOCKSLoris to take much effect, you should start maybe 20 or 30 instances. It's a very small process. Don't worry. I suggest running it on a RDP.
- UDPMod is also very simple. Grab a list. Get the command to run it from the source. (I'm too lazy.) Rename the list to srv.txt. Then open up Command Prompt, and enjoy. I suggest running it on a RDP.
- The server scraper is very easy to use. You'll first have to grab PHP, and install it on your computer. Get an installer from here: <http://windows.php.net/download/>. Then, open up Command Prompt, cd to where you saved script.php, and type 'PHP script.php'. After the script finishes (wait a minute or two), it'll say so, and you'll have a file newudp.txt that you can upload to your attack servers. Rename it to srv.txt for UDPMod though.

Enjoy this. I love you all. Even you, Jesse (Omniscient). Even the scammers, like you, Robert. Although a little less. </3. But still a little.

I'll be back later.

“Unless someone like you cares a whole awful lot, nothing is going to get better. It's not!”

Yours truly,
Jesse (MFJC)
MFJCDevelopmentStudios

(I'm not trolling.)

PS. Jesse, in response to your love to Orgy after you banned me, I got my idea to chargeback on the payments from him. He told me how, a while ago, he got banned too, chargebacked an even larger sum of money, and later got unbanned when he returned only part of it, and not even all.

PPS. Robert, enjoy your Western Union money. You'll need it soon.

PPPS. Brendan, I thought you were a friend. It turns out, you are.
